DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

- a. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

- b. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Allowable Subject Matter

2. Claims 1-19 are allowable over the prior art of record.
3. The following is an examiner's statement of reasons for allowance

As per independent claims 1,9,18,19, the claim limitations pertaining to calculating a distance metric between cepstral covariance signature matrices, wherein the

Art Unit: 2655

distance metric is defined by claims 1,18, or adjusting the sample matrix by adding a distortion matrix defined by the distance metrics, is not explicitly taught by the prior art of record.

With respect to the prior art of record, Netsch et al (5167004) teaches the concept of calculating covariance matrices for each speaker and associated word, performing a covariance matrix pooling, and cross referencing with a covariance matrix for each word (Fig. 9). Li (5995927) teaches computation of rotation matrices tied into the covariance matrix (Fig. 2). Chagnolleau ("Indexing telephone conversations.....analysis) teaches manipulation of cepstral coefficients in matrix format (pp 881-882). Brummer et al ("An Euclidean Distance Measure....Recognition) teaches various expressions for covariance matrices (pp. 168-169). Schmidt et al ("Covariance Estimation...Identification") teaches replacement of covariance calculation with correlations (pp. 335). However, none of the prior art references explicitly teach the claim limitations of the independent claims as noted above. Furthermore, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of the prior art of record to obtain the recited claim limitations of the independent claims as noted above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please see related art listed on the PTO-892 form.

5. This application is in condition for allowance except for the following formal matters:
Please see the issues noted above regarding the abstract and title.

6. Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
